## DETAILED ACTION

### *Response to Arguments*

Applicant's arguments, see Remarks, filed 9/14/09, with respect to the 35 U.S.C. 112, second paragraph rejections of claims 25, 31, 37-40, 43-44, 46-48, and 52-53 have been fully considered and are persuasive. The previous grounds of rejection have been withdrawn. The pending claims are now in condition for allowance.

### *Allowable Subject Matter*

Claims 25, 31, 34, and 37-54 are allowed.

The prior art taken either singularly or in combination fails to anticipate or fairly suggest the limitations of the independent claims 25, 31, 34, 46, and 49.

Regarding claim 25, the prior art taken either singularly or in combination fails to anticipate or fairly suggest a computer readable medium having a data structure for managing a data area of the computer readable medium, the data area having a user area and a non-user area, the user area including a plurality of recording-units, the computer readable medium comprising: a first management area storing a first data block including a plurality of sectors and a second data block including a plurality of sectors, the first management area being a temporary defect management area, the first data block having first information including recordation status indicating whether or not each recoding unit of the user area has recorded data and the second data block having second information including a defect list, ***wherein respective last sectors of the first and second data blocks include third information including a first pointer***

***pointing to an address where latest first information is recorded and a second pointer pointing to an address where latest second information is recorded***, and a second management area storing a latest first data block recorded in the first management area when no further recording of user data is made on the computer readable medium, the second management being a defect management area.

Regarding claim 31, the prior art taken either singularly or in combination fails to anticipate or fairly suggest a method of recording management data on a recording medium, the recording medium including a data area having a user data area and a non-user area, the user area including a plurality of recording-units, the method comprising: recording a first data block including a plurality of sectors and a second data block including a plurality of sectors into a first management area, the first management area being a temporary defect management area, the first data block having first information including recordation status indicating whether or not each recording unit of the user area has recorded data and the second data block having second information including a defect list, ***wherein respective last sectors of the first and second data blocks include third information including a first pointer pointing to an address where latest first information is recorded and a second pointer pointing to an address where latest second information is recorded***, and recording a latest first data block recorded in the first management area into a second management area when no further recording of user data is made on the recording medium, the second management area being a defect management area.

Regarding claim 46, the prior art taken either singularly or in combination fails to anticipate or fairly suggest an apparatus for recording management data on a recording medium, the recording medium including a data area having a user area and a non-user area, the user area including a plurality of recording-units, the apparatus comprising: a controller configured to control recording of a first data block including a plurality of sectors and a second data block including a plurality of sectors into a first management area, the first management area being a temporary defect management area, the first data block having first information including recordation status indicating whether or not each recording unit of the user area has recorded data and the second data block having second information including a defect list, ***wherein respective last sectors of the first and second data blocks include third information including a first pointer pointing to an address where latest first information is recorded and a second pointer pointing to an address where latest second information is recorded***; and the controller being configured to control recording of a latest first data block recorded in the first management area into a second management area when no further recording of user data is made on the recording medium, the second management area being a defect management area.

Dependent claims 37-40, 43-44, 47-48, and 52-53 are allowed with their respective base claims.

Claims 34, 41-42, 45, 49-51, and 54 are allowed as indicated in the Office action dated 8/20/09.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
